

IMMUNIZATION CLINICS  
For all ages  
7:00 AM to 5:00 PM  
Bring immunization records  
By appointment or drop-in  
Questions?  
Call 827-6931

**VACCINES MADE SIMPLE**

Did you know that most childhood vaccines produce immunity about 90-100% of the time?<sup>1</sup>

It's true.

**VACCINES SAVE LIVES**

Since coming into widespread use, immunizations have **saved billions** of lives worldwide.<sup>2</sup>

During 2000-2010, measles vaccination prevented an estimated **20.3 million deaths.**<sup>3</sup>

For most vaccine-preventable diseases, there has been a **95%** or more reduction in incidence.<sup>4</sup>

**VACCINES PROTECT THE VULNERABLE**

When more people are vaccinated, there's less chance of an outbreak. This is called **herd immunity.**

Some people, like those being treated for cancer, may not be able to get certain vaccines and are **at risk** from those who are unvaccinated.

**4 of 5 babies** caught whooping cough from someone in the home.<sup>5</sup>

**50,000** Adults die from vaccine-preventable diseases in the U.S. every year.<sup>6</sup>

**VACCINES ARE SAFE**

The FDA requires up to **10 or more years** of testing for all vaccines before they are licensed.<sup>7</sup>

Many studies have shown **there is no link** between vaccines and autism.<sup>8</sup>

The **side effects** of vaccines, if any, are **almost always minor.** Serious side effect/allergic reactions are very rare.<sup>9</sup>

**BY GETTING VACCINATED, YOU PROTECT:**

- Your family, particularly the very young and old
- Those who are sick or can't be vaccinated
- Your entire community
- Future generations

Speak with a **pediatrician** you trust about your questions and concerns, and to determine the best vaccine schedule for your child.
