# DS850(i) DIGITAL CENTRAL SCAN PAPER TABULATOR

Fully Certified
The DS850® is fully compliant with EAC guidelines for usability, accessibility, and security requirements.

User-Friendly Design and Operation
Designed specifically for the election process, the DS850 features a user-friendly software interface on a 15-inch LCD color touch screen. The S-shaped transporter allows for a natural flow, creating separation between individual ballots.

Security and Accuracy
System integrity and electronic audits make the DS850 the most dependable central vote scanner and vote tabulator on the market. Safeguards, such as data encryption and digital signatures, help protect sensitive data and verify authenticity, including certification of all firmware.

The DS850 is the only high-speed vote scanner in the marketplace that can sort various ballot sizes at full speed. It scans and sorts 14-inch double-sided ballots at 300 per minute into three output trays, separating ballots into three categories: counted, requires further review, and write-ins.

Folded Ballot Processing
The DS850 is designed with a series of patent-pending TruGrip™ rollers to apply constant pressure, ensuring quality control throughout the entire vote-tabulating process.
